

Burger Farm App – UI Design Framework & Complete Screen Blueprint

Role lens: 15-year QSR founder + designer + operator

Deadline: Finalized Figma prototype by May Mid

Goal: Every single customer-facing screen mapped, every CTA defined, every state considered – nothing left to chance

Design Mantra for Burger Farm: *Hungry people are the most impatient people on earth. Every screen must be so obvious, so fast, and so crave-worthy that the brain doesn't think – it just orders.*

Pre-Design Decisions (Lock Before Opening Figma)

These aren't design decisions – they are business decisions that will determine the design. Lock these in the kickoff session with Rajat sir:

Decision	Options	Why It Matters
App tone	Fun & street / Premium & dark / Warm & homey	Dictates every color, font, illustration choice
Primary color	Warm red, deep orange, rich brown	Appetite psychology – yellow/orange = hunger trigger
Typography feel	Bold & punchy / Clean & modern	QSR needs bold, scannable
Dark mode / Light	One or both	Dark = premium, Light = accessible

Photography style	Real food photos (recommended) / Illustrated	Real photos outperform by 60%+ in food apps
Bottom nav items	Home / Menu / Orders / Offers / Profile	5 max — QSR apps die with complex nav
Mascot / Character	Yes (memorable) / No (clean)	Burger Farm could have a character — huge brand equity
Order type priority	Delivery first / Pickup first / Equal	Determines hero CTA placement

Master Screen Map — All 72 Customer-Facing Screens

Organized by Flow Zones — design one zone at a time, in this exact order.

To be brainstormed:

There will be two kinds of loaders on the app : 1. Saving Data Loader and 2. Fetching Data Loader

A. For saving data loader we have to brainstorm on how it should look , will come on the full screen or it will come on which part of the screen .

Conclusion : We will pick jack in the box type and a burger bag comes with items moving inside the bag as a loader. OR Starbucks type of where the farmers come on the screen and haze and everything comes on the screen.

B. For fetching data loaders we will decide it based on the screens and the type of data fetched.

ZONE 1: LAUNCH & ONBOARDING (7 Screens)

First impression. User decides in 8 seconds if they're staying.

Screen 1.1 — Splash Screen

To be brainstormed:

A. The burger farm logo animation - That has to come on the splash screen

Conclusion : Splash screen same as in the demo task

B. Duration Conclusion : less than 3 sec, maybe 2.5

- Burger Farm logo animated (bounce, sizzle, or zoom in)
- Background: brand color or dark with steam/sizzle texture
- Duration: 1.8–2 seconds max
- No CTA — just brand moment
- Design note: This is a heartbeat. Make it pulse with the brand.

To be brainstormed:

1. Should the login and store selection happen on the Onboarding screens only or later

Conclusion : Yes login and store selection will be done on onboarding screens.

Options :

A .Either the user logs in on the second onboarding screen and then selects the store on the last (third) on boarding screen.

B. The user can skip and after the last onboarding screen we can give them access to login and update store details.

2. What exactly we have to tell on the onboarding screens to the user

Screen 1.2 – Onboarding Slide 1 of 3

- Headline: "Real Burgers. Real Fast."
- Visual: Hero food shot or illustration — the BEST burger photo Burger Farm has
- Skip button (top right, always visible)
- Progress dots (bottom)
- CTA: "Next →"

Conclusion : The mc donalds japan moving items screen and then get started at button and

Screen 1.3 – Onboarding Slide 2 of 3

- Headline: "Order. Track. Devour."
- Visual: App mockup showing order tracking or a delivery animation
- Skip button
- CTA: "Next →"

Conclusion : Top logo (Welcome to Burger Farm), middle is CTAs and Bottom vectors

Screen 1.4 – Onboarding Slide 3 of 3

- Headline: "Rewards That Actually Reward You"
- Visual: Loyalty coins / badge graphic
- CTA: "Get Started" (primary button) + "Already have an account? Login" (text link)

Conclusion : No third Onboarding screen

To be brainstormed:

1. What all login options the user should have, do we also have to give a guest login option ? **Google , Apple , Phone**
2. If the user logs in through Google , Apple or phone after that what all data points we have to collect and how ? **Name, Date of Birth (could be like open a surprise and enter) , Phone Number (If google and apple)**

After signup we have to show an offer kind of thing to the user for downloading the app and all

Screen 1.5 – Sign Up Screen

- Fields: Name, Phone number (primary – not email, India context)
- "Or continue with" → Google / Apple login (one-tap)
- Guest ordering option: "Order as Guest" (text link, below)
- Terms & Privacy link (small, non-intrusive)
- CTA: "Send OTP" (primary)
- Design note: No password field. India = OTP first. Remove all friction.

Screen 1.6 – OTP Verification Screen

- Headline: "Verify it's you"
- Subtext: "OTP sent to +91 XXXXX XXXXX" + "Change number" link
- 4 or 6 digit OTP input (large boxes, auto-focus)
- Countdown timer: "Resend in 00:30"
- "Resend OTP" (greyed out until timer expires)
- CTA: "Verify & Continue" (auto-triggers on last digit entry)

Screen 1.7 – New User: Name & Preferences (First-Time Only)

- "What do you go by?" – Name field (pre-filled from Google if used)
- "What are you usually in the mood for?" – chips: 🍔 Burgers / 🍟 Sides / 🥤 Drinks / 🌶️ Spicy / 🥗 Light Bites
- Design note: This feeds the personalization engine. Keep it light – max 10 seconds to complete.
- CTA: "Let's Go 🔥"

To be brainstormed:

1. When stores are loaded from the backend, which loader will be visible here on this screen.
2. How the store selection should work, we have to talk about the functionality and the UI / UX both here.
3. After selecting one store how the user will be able to change later on the app , on which screen.
4. Do we have to also take the user's address or not , because we are not delivering as of now , so that makes no sense and adds additional journey **No**
5. How many seconds a new user should take to come to home screen for ordering in case its a new user. 2.5 s (splash screen) + 1s (onboarding 1) + On boarding 2 (5-10 s) = 12 secs

Conclusion : The hybrid approach show order selection on the top while ordering and use starbucks kind of thing.

ZONE 2: LOCATION & OUTLET SELECTION (4 Screens)

The most underrated zone. Getting this wrong kills the order flow.

Screen 2.1 – Location Permission Prompt (System + Custom) - Default

- Custom screen BEFORE the iOS/Android system popup
- Visual: Map pin animation or store icon
- Headline: "Find your nearest Burger Farm"

- Body: "We'll show you the closest outlet and delivery time"
- CTA: "Allow Location" (primary) + "Enter manually" (secondary)
- Design note: Never throw the raw system permission popup cold. Pre-warm it. Conversion is 3x higher.

Screen 2.2 – Outlet Selector Screen - Starbucks

- Map view (top half) + List view (bottom half) – toggle between
- Each outlet card shows: Name, distance, estimated time, "Open" / "Closing Soon" / "Closed" badge
- Delivery zone indicator on map
- CTA: "Order from this outlet" on each card
- Filter: "Delivery" / "Pickup" toggle at top

Screen 2.3 – Delivery Address Entry - No

- Search bar: "Search area, street, landmark"
- Google Maps embed with draggable pin
- Recent addresses section (for returning users)
- Saved addresses section
- CTA: "Confirm Location" (sticks to bottom)
- Design note: The pin drag must snap to road. Show address as text as user drags.

Screen 2.4 – Address Detail Screen - No

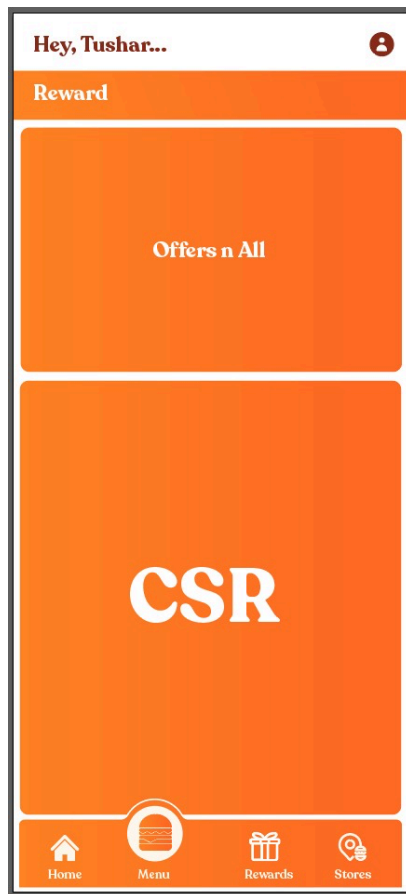

- Auto-filled address line 1 from map pin
- Manual fields: Flat/House No., Building/Society, Landmark (optional)
- Tag options: 🏠 Home / 🏢 Work / 📍 Other (saves for future)
- CTA: "Save & Continue"

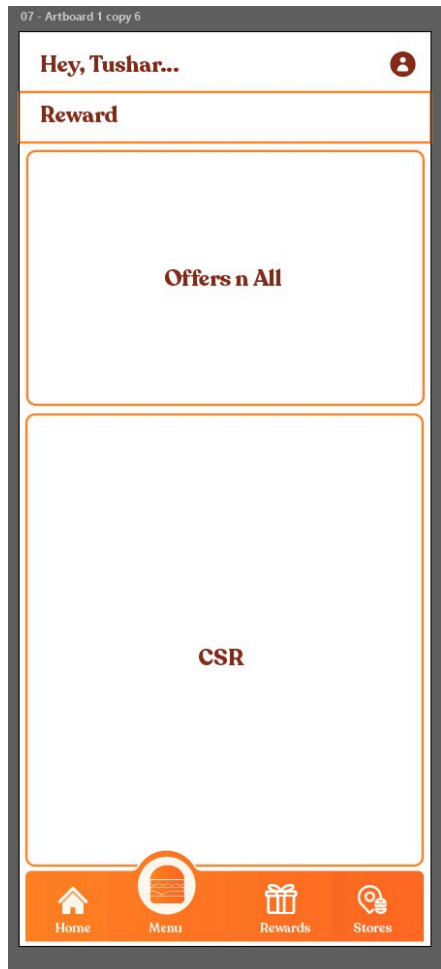

To be brainstormed:

- A. What screen has to be the home screen after login and location selection.
- B. How the home screen has to look
- C.

ZONE 3: HOME SCREEN ECOSYSTEM (6 Screens)

To be brainstormed:

Here after we long scroll we burger animation and long scroll and burger opens and automatically to the menu screen

The heartbeat of the app. Where craving meets conversion.

Screen 3.1 – Home Screen (Main)

Header Section:

- Greeting: "Hey [Name] 🖐️" (personalized)
- Location display: "Delivering to: Malviya Nagar" + change arrow
- Estimated delivery time badge: "~28 min"

Hero Banner (Carousel – auto-scroll):

- Slide 1: Current hero offer / LTO (Limited Time Offer)
- Slide 2: New item launch
- Slide 3: Loyalty program teaser

- Dots indicator below. Swipeable.

Quick Reorder Section (returning users only):

- "Order it again?" horizontal scroll cards
- Shows last 3 orders with thumbnail, name, price
- "Add to Cart" button on each card
- Design note: This is a CONVERSION MACHINE for repeat customers. Prioritize it.

Category Chips (horizontal scroll):

- 🍔 Burgers / 🌮 Wraps / 🍟 Fries & Sides / 🥤 Drinks / 🍦 Desserts / 🔥 Combos
- Active chip = filled/colored. Scrolls the menu below.

Featured / Best Sellers Section:

- 2-column grid cards
- Each card: Food photo, name, price, ★ rating, "Add +" button
- "Bestseller" / "New" / "Spicy 🌶️" badges on cards

Meal Deal Section:

- "🔥 Today's Combo Deals" horizontal scroll
- Large card: photo, deal name, original price struck, deal price, "Grab It" CTA

Footer CTA (persistent floating):

- Cart icon with item count bubble and total price
- Appears as soon as first item is added

Screen 3.2 — Search Screen

- Auto-focused search bar on open
- Below: "Popular Searches" chip list — "Crispy Chicken", "Cheese Burst", "Combo"
- Recent searches (on return visit)
- As user types: live results with item thumbnails
- No results state: "Hmm, we don't have that... yet 🙄 Try [suggestion]"

Screen 3.3 — Search Results Screen

- Results list with filter chips at top: "All / Veg / Non-Veg / Bestseller / Under ₹150"
- Each result: thumbnail, name, description snippet, price, "Add +"
- Sort by: Relevance / Price Low-High / Rating

Screen 3.4 – Notifications Screen

- Tabs: "All" / "Offers" / "Orders" / "Updates"
- Each notification: icon, headline, subtext, timestamp
- Swipe left to dismiss
- "Mark all read" at top
- Empty state: "Nothing new. But your next craving is coming 🍔"

Screen 3.5 – Offers & Deals Screen

- Tabs: "Active Offers" / "Expiring Soon" / "Used"
- Each offer card: visual, offer headline, validity, T&C link, "Apply" CTA
- Offer types displayed: Flat discount / Free item / BOGO / First order / Referral reward
- "Copy Code" button where applicable

Screen 3.6 – First-Order Welcome Screen (One-time popup)

- Triggered on first visit post-login
- "Welcome to the Farm! 🎉"
- Shows: first-order offer (e.g., ₹50 off)
- CTA: "Start Ordering" + "Explore Menu"

BNB : Home , Menu , My farm

ZONE 4: MENU & BROWSING (8 Screens)

Where hunger becomes decision. The most critical design real estate.

Top has store options (starbucks order screen store - selection at the top, mode of ordering) , Horizontal veg/non veg and top sellers.offers, today's offer (+ reward points), side category, selection and then items

Side filter

Similar to burger king and mc donalds

Screen 4.1 – Full Menu Screen

- Sticky header: category tabs (horizontal scroll)
- Veg / Non-Veg toggle (prominent – India essential)
- Item cards: full-width, food photo left, name + description + price right, "Add +" button
- Section headers with emoji: "🔥 Bestsellers" / "NEW New Arrivals" / "🌶️ Spicy Picks"
- "Customize" label on items that have variants
- Quick scroll: Side index (A-Z or by section) – optional
- Sticky floating cart bar at bottom with count + price

Screen 4.2 – Category-Filtered Menu Screen

- Same layout as 4.1 but filtered to one category
- Active category highlighted in tab bar
- Smooth scroll to section when tab tapped

Screen 4.3 – Item Detail Screen

This screen has to make the customer salivate.

- Hero Image: Full-width, high-quality, zoomable. This is the most important design element in the app.
- Item name (large, bold)
- Short description (2 lines max)
- ★ Rating + "X reviews" link
- "Bestseller" / "New" / "Spicy" badge if applicable
- Nutritional info toggle (expandable – don't lead with it but include it)
- Allergen info (small, accessible)
- Customization Section:
 - Size selector (Regular / Large) – radio buttons
 - Add-ons: Cheese / Extra Patty / Sauce (checkbox list with prices)

- Remove ingredients: "No onions / No mayo" (checkbox)
 - Special instructions text box (optional)
- Quantity selector: — 1 +
- "People also order" section: 3 item cards horizontal scroll
- Sticky Bottom CTA: "Add to Cart — ₹[total]" (updates in real-time as customizations added)
- Design note: The CTA price must update live. Users love seeing the price change. It gamifies customization.

Screen 4.4 — Combo Builder Screen

- Triggered when "Build a Combo" is selected
- Step 1: Choose your burger (list)
- Step 2: Choose your side (list)
- Step 3: Choose your drink (list)
- Progress indicator: Step 1 of 3
- Preview panel at bottom: selected items with mini images
- CTA: "Add Combo to Cart — ₹X"

Screen 4.5 — "Add to Cart" Confirmation Micro-screen

- Not a full screen — a bottom sheet / modal
- Shows: Item added, current cart summary (items + total)
- "Continue Browsing" + "Go to Cart"
- Duration: Can auto-dismiss after 3s if no action

Screen 4.6 — Veg / Non-Veg Filter Active Screen

- Same as main menu but with active filter pill showing "● Veg Only" or "● Non-Veg"
- Easy dismiss/clear filter
- Items not matching are greyed out (not hidden — shows what they're missing)

Screen 4.7 — Recently Viewed Items Screen

- Accessible from Home (scroll down) or Profile
- Grid view of recently viewed items
- "Add to cart" button on each

Screen 4.8 – "Unavailable Item" State Screen / Modal

- Triggered when user taps an item that is out of stock or time-limited
- "This one's sold out right now 😞"
- "Notify me when it's back" toggle
- Suggestions: "You might also like..." – 3 alternatives

ZONE 5: CART & PRE-CHECKOUT (5 Screens)

The cart is where orders die. Make this bulletproof.

Screen 5.1 – Cart Screen

- Header: "Your Order  " + outlet name
- Item list: thumbnail, name, customization summary (small text), qty controls (- qty +), price, remove (swipe or X)
- "Add more items" link (goes back to menu)
- "Special instructions for kitchen" text field
- Coupon Section: Input field + "Apply" – or "View Available Offers" link
- Order Summary breakdown:
 - Item total
 - Delivery charge (or "FREE" if above threshold – show threshold)
 - Taxes & charges (expandable to explain each)
 - Discount (in green)
 - Grand Total (bold, large)
- Order Type toggle: Delivery  / Pickup  (if both available)
- CTA: "Proceed to Checkout – ₹X" (sticky bottom)
- Design note: Show savings amount prominently ("You saved ₹50 "). It feels good and reduces cart abandonment.

Screen 5.2 – Empty Cart Screen

- Illustration: empty plate or sad burger
- "Your cart is empty"
- Subtext: "Start with something legendary"
- CTA: "Browse Menu"

Screen 5.3 – Minimum Order Not Met State

- Inline alert within cart screen (not a popup)
- "Add ₹X more to place your delivery order"
- Progress bar showing how close they are
- Suggestion: "Quick add: [item] ₹X" – 2 relevant add-ons

Screen 5.4 – Coupon / Offer Application Screen

- List of all available offers (auto-fetched for this user)
- Each offer: title, description, min order note, validity
- "Apply" button on each
- Applied state: checkmark + "Wohoo! ₹X saved"
- Invalid state: "This code isn't valid for your current order" (explain why)

Screen 5.5 – Upsell / Cross-sell Bottom Sheet

- Triggered before checkout: "Almost there! People who ordered this also added:"
- 3–4 item cards: photo, name, price, "Add +"
- "No thanks, proceed" link
- Design note: This one screen can add ₹30–80 to average order value consistently. It pays for itself within week 1.

ZONE 6: CHECKOUT FLOW (6 Screens)

Clean, fast, trusted. No surprises = no drop-offs.

Screen 6.1 – Delivery Address Confirmation

- Selected address displayed with map thumbnail
- "Change" link (goes to address screen)
- Delivery estimate: "Arriving in ~28–35 mins"
- "Add delivery instructions" field (optional)
- CTA: "Continue to Payment"

Screen 6.2 – Pickup Confirmation Screen (if pickup selected)

- Store address + map
- Estimated pickup time
- "I'll be there in [time]" selector (10 min / 20 min / 30 min)
- "Get directions" link
- CTA: "Continue to Payment"

Screen 6.3 – Payment Screen

- Order summary (collapsed, expandable) at top
- Grand Total (large, prominent)
- Payment Methods:
 - UPI (first, most used in India) – UPI ID input or QR option
 - "Pay via UPI App" – shows installed apps (GPay, PhonePe, Paytm icons)
 - Credit/Debit Card (with save card option)
 - Netbanking
 - Cash on Delivery (if enabled, with note "₹X max COD limit")
 - Burger Farm Wallet (if implemented – shows balance)
- Saved payment methods at top for returning users
- CTA: "Pay ₹[amount]  " (lock icon = trust signal)
- Secure payment trust badges (small): Razorpay / SSL

Screen 6.4 – Payment Processing Screen

- Animated: "Processing your payment..."
- Do not allow back press
- Progress indicator (spinner or wave)
- "Do not press back or close the app"

Screen 6.5 – Order Confirmed Screen

This is the emotional peak of the entire app. Make it feel AMAZING.

- Full-screen celebration: confetti, animated checkmark
- "Order Placed! 
- Order number (large)
- Estimated delivery/pickup time (large)
- Brief order summary (2–3 items listed, "+ X more")
- Loyalty points earned: "+25 Farm Points 

- CTAs:
 - "Track My Order" (primary)
 - "Rate & Share" (secondary — triggers social share flow)
 - "Back to Home" (text link)

Screen 6.6 — Payment Failed Screen

- Clear: "Payment wasn't processed 😞"
- Reason (generic but helpful): "Your bank declined this. Try a different method."
- CTAs:
 - "Try Again" (same method)
 - "Use Different Payment Method"
 - "Contact Support"
- Design note: DO NOT lose the cart. On failure, cart must be preserved exactly as-is.

ZONE 7: ORDER TRACKING (5 Screens)

Post-order anxiety is real. This zone kills it.

Screen 7.1 — Live Order Tracking Screen

- Top: Visual status timeline (4 steps):
 -  Order Confirmed
 -  Preparing Your Food
 -  Out for Delivery / Ready for Pickup
 -  Delivered / Picked Up
- Real-time ETA countdown: "Arriving in 22 minutes"
- Live map (delivery orders): delivery partner location as a moving pin
- Delivery partner info card (if applicable): photo, name, ★ rating, call / chat icons
- Order summary (collapsed, expandable)
- CTAs:
 - "I have an issue with my order" (link to support)
 - "Cancel Order" (only in first 2 minutes — greyed out after)

Screen 7.2 — Order Status: Preparing Screen

- Kitchen animation: cooking visual / fire animation
- Estimated time updating live
- Tip option (optional – "Show the kitchen some love 🔥")

Screen 7.3 – Order Out for Delivery Screen

- Delivery partner details prominently shown
- Map with real-time pin
- "Call Delivery Partner" (direct call CTA)
- "Share Live Tracking" – generates a link to share with family

Screen 7.4 – Order Arrived / Ready for Pickup Notification Screen

- Full-screen moment: "Your order is here! 🍔"
- For pickup: "Your order is ready! Come get it 🏃"
- Outlet address (for pickup) / "Ring the bell" for delivery
- CTA: "Confirm I received my order" (marks as delivered)

Screen 7.5 – Order Complete / Rate Your Experience Screen

- Triggered automatically after confirmed delivery
- "How was your Burger Farm experience?"
- 5-star rating (large, tappable stars)
- Item-specific ratings (optional, expandable): "How was your [item]?"
- Quick feedback chips: 🔥 Loved it / 😊 Good / 😐 Okay / 😞 Could be better
- Open text: "Anything else? (optional)"
- CTA: "Submit & Earn 10 Points"
- "Skip" (text link)

ZONE 8: POST-ORDER & RE-ENGAGEMENT (4 Screens)

Screen 8.1 – Order History Screen

- List view: each order = date, items (brief), total, status badge, outlet
- Filters: All / Completed / Cancelled
- CTA on each: "Reorder" (one-tap reorder – killer feature for QSR)
- Tap to expand: full order details

Screen 8.2 – Order Detail Screen

- Full breakdown: items, customizations, payment, delivery address
- Receipt download option
- "Reorder" CTA
- "Report an issue with this order" link

Screen 8.3 – Reorder Confirmation Screen

- Bottom sheet: "Reorder [Previous Order Name]?"
- Shows items + total
- Outlet auto-selected (or asks if changed)
- CTA: "Yes, Reorder" / "Modify first"

Screen 8.4 – Social Share Screen

- Triggered from order confirmed screen
- "Share your order and earn 20 points!"
- Pre-designed share card (branded, Instagram-ready): "I just ordered from Burger Farm 🍔"
- Share to: WhatsApp / Instagram / Twitter / Copy link
- Referral link auto-embedded

ZONE 9: LOYALTY & REWARDS (5 Screens)

This zone converts one-time buyers into addicts.

Screen 9.1 – Loyalty / Farm Points Dashboard

- Prominent points balance: "🌾 480 Farm Points"
- Tier status: Bronze / Silver / Gold / Platinum Farm member
- Visual tier progress bar: "120 more points to reach Gold 🏆"
- Points history (recent): earned / spent list
- "How to earn more" explainer link

Screen 9.2 – Rewards Catalog Screen

- Grid of redeemable rewards:
 - Free item (e.g., "Free Fries — 200 points")
 - Discount voucher ("₹50 off — 300 points")
 - Exclusive item (members only)
- "Redeem" CTA on each
- Availability: "2 left today" urgency tags

Screen 9.3 — Reward Redemption Confirmation

- Bottom sheet / modal
- "Use 200 points for Free Classic Fries?"
- Points balance before → after
- CTA: "Confirm Redemption" / "Cancel"

Screen 9.4 — Referral Screen

- Unique referral code (large, easy to copy)
- "Share with friends" — WhatsApp pre-written message
- How it works: 3 steps (you share → they order → you both earn)
- Track: "X friends joined, X orders completed"

Screen 9.5 — Scratch Card / Surprise Reward Screen

- Triggered on milestone orders (every 5th order, birthdays, etc.)
- Animated scratch card UI
- Reveal: discount, free item, or points
- CTA: "Apply to next order"

ZONE 10: USER PROFILE & ACCOUNT (6 Screens)

Screen 10.1 — Profile Home Screen

- Avatar / initials (no photo upload pressure)
- Name, phone number
- Tier badge
- Quick stats: "X orders · Member since [month]"
- Menu list:

-  My Orders
-  Saved Addresses
-  Payment Methods
-  Loyalty & Rewards
-  Notification Settings
-  Dark Mode toggle
-  Help & Support
-  Account Settings
-  Logout

Screen 10.2 – Edit Profile Screen

- Name, email (optional), phone (non-editable, shows OTP change flow)
- Dietary preference update (Veg / Non-Veg / Both)
- Birthday (for surprise reward)

Screen 10.3 – Saved Addresses Screen

- List of saved addresses with tags (Home / Work / Other)
- Edit / Delete on each
- "Add new address" CTA

Screen 10.4 – Saved Payment Methods Screen

- Saved cards (last 4 digits, type icon)
- Saved UPI IDs
- Delete option on each
- "Add new" CTA

Screen 10.5 – Notification Settings Screen

- Toggles:
 - Order updates (always on, non-toggleable)
 - Offers & promotions
 - New menu items
 - Loyalty points updates
 - "Surprise me" (random delight notifications)

Screen 10.6 – Delete Account Screen

- Confirmation flow (2 steps – don't make it easy to delete, but don't block it)
- "Are you sure? Your points and history will be lost"
- "Yes, delete my account" (destructive, red)

ZONE 11: HELP, SUPPORT & EDGE CASES (6 Screens)

Screen 11.1 – Help & Support Home

- "What can we help you with?"
- Quick links: "Wrong item delivered" / "Didn't receive order" / "Payment issue" / "Cancel order" / "Other"
- Live chat CTA (if available)
- Call support button
- FAQ section

Screen 11.2 – Report Order Issue Screen

- Select issue type (chips)
- Upload photo (optional)
- Description text box
- CTA: "Submit Report"
- Resolution promise: "We'll get back to you within 2 hours"

Screen 11.3 – Order Cancellation Screen

- Time limit warning: "Orders can be cancelled within 2 minutes"
- Reason selection (required): "Changed my mind / Wrong items / Duplicate order / Other"
- Refund policy note (clear, simple)
- CTA: "Confirm Cancellation" (red) / "Keep Order" (primary)

Screen 11.4 – Refund Status Screen

- Refund tracking: Initiated → Processing → Credited
- Timeline with dates

- Amount and payment method

Screen 11.5 — No Internet / Offline State

- Illustration + "You're offline"
- "Check your connection and try again"
- "Retry" CTA

Screen 11.6 — App Update Required Screen

- "New update available!"
- What's new (brief bullet points)
- CTA: "Update Now" (links to store)
- Force update state: no skip option

ZONE 12: SPECIAL / BRAND-SPECIFIC SCREENS (5 Screens)

Unique to Burger Farm — this is what makes it not a template.

Screen 12.1 — "The Farm Story" Screen

- Accessible from Profile or Home footer
- Brand story: who Burger Farm is, what makes the food different
- Photo gallery / behind the scenes
- "Meet the Team" optional
- Design note: In a market full of faceless ghost kitchens, this screen builds enormous trust and loyalty.

Screen 12.2 — New Item / LTO Launch Screen

- Full-screen splash for new item launch
- Video or cinemagraph if possible
- Large hero image
- "Try it first — Early Access" CTA
- Countdown timer if pre-launch

Screen 12.3 — Birthday / Anniversary Special Screen

- Triggered on user's birthday (if provided)
- Full-screen delight: "Happy Birthday [Name]! 🎂"
- Auto-applied birthday offer
- CTA: "Claim My Birthday Treat"

Screen 12.4 – Voice AI Upsell Screen (Cross-promote Vertical 2)

- In-app CTA promoting the Voice AI feature
- "Try ordering with your voice! 🗣️"
- "Tap to start talking"
- Deeplinks to voice ordering flow

Screen 12.5 – Feedback / NPS Screen

- Triggered after 3rd order or after 30 days
- "How likely are you to recommend Burger Farm to a friend?"
- 0–10 scale
- Follow-up: "What's one thing we could do better?" (open text)
- Design note: This is your product research engine. Build it clean and non-intrusive.

Design System – What to Build Before Any Screen

Before designing even Screen 1, build these components:

1. Color System

- Primary (action / brand): One dominant color (e.g., Burger Farm Red/Orange)
- Secondary: Accent (e.g., warm yellow for price highlights)
- Background: Near-black (dark mode) or Off-white (light)
- Surface: Cards, modals
- Success green / Error red / Warning yellow / Info blue

2. Typography Scale

- Display (hero text): Bold, 28–36px
- Title (screen headers): SemiBold, 20–24px
- Body: Regular, 14–16px
- Caption: 11–12px
- Use 1 font family — suggest: Plus Jakarta Sans or DM Sans (clean, modern, excellent in food apps)

3. Component Library (Build These 20 First)

Primary Button / Secondary Button / Text Link / Input Field / OTP Field / Search Bar / Product Card / Offer Card / Category Chip / Bottom Sheet / Toast Notification / Rating Stars / Quantity Stepper / Toggle Switch / Progress Bar / Tab Bar / Loading Skeleton / Empty State / Error State / Badge

4. Icon Set

- Use a single icon library — Lucide or Phosphor Icons
- Food-specific custom icons where needed (burger, farm, flame)

5. Motion & Microinteraction Rules

- Transition duration: 200–300ms (faster = snappier feel)
- Easing: ease-out for entrances, ease-in for exits
- Haptic triggers: add to cart, payment success, points earned
- Loading skeletons (not spinners) everywhere data loads

Design Sprint Timeline

Week	Deliverable
Week 1 (Apr 1–7)	Kickoff session + decisions locked + moodboard approved
Week 2 (Apr 8–14)	Design system built: colors, typography, 20 components

Week 3 (Apr 15–21)	Zones 1–3 wireframes (lo-fi) complete
Week 4 (Apr 22–30)	Zones 4–7 wireframes (lo-fi) complete
Week 1 (May 1–7)	All zones wireframed → First prototype → Internal review
Week 2 (May 8–14)	Hi-fi design: Zones 1–6
Week 3 (May 15–21)	Hi-fi design: Zones 7–12
Week 4 (May 22–28)	Full hi-fi prototype → Rajat sir review → Iterations
May End	✅ Figma handoff ready for software company

✅ Figma Handoff Checklist (What the Dev Company Needs)

- All 72 screens in Figma, organized by zone/flow
- Component library with all states (default, hover, active, disabled, loading, error)
- Design tokens exported (colors, spacing, radii)
- All screen flows linked as clickable prototype
- Annotation layer: every CTA explained, every conditional logic noted
- Asset export (icons as SVG, images at 1x/2x/3x)
- Brand guidelines document attached
- Screen transition notes (which screens slide, which fade, which bottom-sheet)

Ideation :

1. Splash screen change with new product launches.
2. Founder's favourite menu
3. Avatar creation of the user
